The goal of this role is to use AI tools like https://bolt.new/ or https://lovable.dev/ to build simple projects fast. The idea is that all core screens, marketing pages and functionality can be 90% built with AI, then an engineer can come in to integrate the last 10 - 15% which generally consists of 3rd party APIs.

For this case we're looking to build a simple website that humanizes AI text. The home page should look very similar to this humanizer tool: https://quillbot.com/ai-humanizer and have a screen whereby you can input text and have an output. Using https://bolt.new/ or https://lovable.dev/ we'd like you to build an AI Humanizer website that has the following features:
- Home page that has a sample rewriter tool like https://quillbot.com/ai-humanizer along with other marketing sections. You can use other similar sites for reference. You do not need to build all of the other tools that this site has
- Pricing page
- Login with user name and password
- Ability to log out
- A payment processing screen (does not have to actually take payments)
- Contact page
- A dashboard where you can store files / past projects
- A tracker for how many credits a user has used
- Additional credits for different tiers / plan types

Bolt.new integrates with Supabase so you can simply use that as your backend. Loveable has a similar publisher.

The goal is to use prompting to build the site in a matter of hours instead of days. For context, we built a similar site with Bolt in 2 hours.

Finally, integrate Undetectable AI's humanizer API for the actual output in the humanizer box. This is not required but if it's easy for you and you have extra time please attempt this step. API credentials and a link to the documentation are included below. The site should be 90% functional, pretty, and useable. We do not expect full polishing or payments to work at this stage.

To show your work you can publish your app via netlify.app - it's natively integrated into Bolt.New. If you use Loveable or some other, similar AI coding platform you can use their publishing options. Please time yourself and let us know how long the entire process took.

Once done please submit the case to kelsey@adly.com.

Sample AI Generated Prompt You Can Use To Check Your Work
Abraham Lincoln, the 16th President of the United States, is widely regarded as one of the nation's greatest leaders. Born on February 12, 1809, in a Kentucky log cabin, Lincoln rose from humble beginnings to become a self-taught lawyer, legislator, and eventually a president during

one of the most critical periods in American history. Elected in 1860, Lincoln led the country through the Civil War, preserving the Union and paving the way for the abolition of slavery.

His leadership was defined by integrity, empathy, and a deep commitment to justice. The Emancipation Proclamation, issued in 1863, was a turning point that redefined the war's purpose and gave moral force to the Union cause. Lincoln also delivered iconic speeches, such as the Gettysburg Address, that expressed the nation's ideals of liberty and equality.

Despite intense opposition and personal tragedy, Lincoln remained steadfast in his vision of a united, free America. On April 14, 1865, just days after the Civil War ended, he was assassinated by John Wilkes Booth, becoming a martyr for freedom and national unity. Today, Lincoln's legacy endures as a symbol of resilience, moral leadership, and the enduring promise of democracy.
